

Water is one of our most precious resources. As our population continues to grow, demands on precious water resources increase.

For most households, the vast majority of water is used indoors. The average family of four uses 400 gallons of water each day and over 22,000 gallons per year just for showers and baths! Using water-saving techniques can save you money while diverting less water from our natural water sources. It can also reduce water and wastewater treatment costs and the amount of energy used to treat, pump, and heat water. This lowers energy demand, which helps prevent air pollution.

In addition to our standard water conservation practices, you can make choices at the New Home Showroom that will further reduce your water usage and energy bills while helping to reduce impact on the environment.

QUADRANT HOMES STANDARD

- **Energy Star® Dishwashers** These dishwashers use less water and energy than a standard dishwasher. Remember to run your dishwasher with a full load to get the most out of the energy used to run it.
- **Efficient Water Heater** The high efficiency water heater that Quadrant installs uses less energy than a standard hot water heater and saves money on monthly utility bills.

🏠 LIVING SOUND OPTIONS

- **Energy Star® Washer** This washing machine saves you money by using less water and energy than a conventional washer and also gets your clothes cleaner.
- **High-Efficiency Showerhead** By using water-efficient showerheads and aerators, families can reduce water usage by 20%.
- **Tankless Water Heater** You don't use hot water 24 hours a day, but you are paying to heat water all day long. Quadrant offers a tankless water heater that instantly heats the water as it passes through the heater, drastically minimizing the amount of water wasted while waiting for it to heat up.
- **Rain Barrel** Allows you to collect rain water and then use it for watering your garden or other outdoor tasks. This saves money on water bills and reduces the amount of water you use. (Pictured left.)
- **Dual-Flush Toilet** Don't be fooled, this toilet doesn't flush two times. It actually has two flush modes, one of which releases only half the amount of water held in the toilet tank.
